TOOLS:

- [iFixit Opening Tools](#) (1)
- [Phillips #00 Screwdriver](#) (1)

PARTS:

- [Parrot AR Drone 2.0 Motor and Controller](#) (1)

Step 1 — Propeller and Gear

- Remove the foam body.

Step 2

- Disconnect the battery by pulling the two red wires apart.
- Remove the battery by releasing the battery retaining straps.

Step 3

- Remove the small retaining clip using a plastic opening tool.
- ⓘ Be careful as these clips can fly off and can be difficult to find.

Step 4

- The propeller, gear, and rod can be removed by simply lifting them off the motor.

Step 5 — Motor

- Disconnect the connector at the bottom of the motor assembly.

Step 6

- Remove the three 5mm screws on the top of the motor assembly with a PH00 bit.

Step 7

- Remove the three 5mm screws on the bottom again using a PH00 bit.
- ⓘ The three screws from the top are different from the three screws on the bottom.

Step 8

- Carefully wiggle out the motor assembly out of the arm.

To reassemble your device, follow these instructions in reverse order.
